

## Development Project Engineer

Prosonix is establishing itself as a world leader in advanced particle engineering technologies through the application of power ultrasound at commercial scale. Based in Oxford, the Company is experiencing rapid growth in demand for its products within the target pharmaceutical drug delivery market. Prosonix is now looking to recruit a process engineer to contribute to all areas of technology development.

Reporting to the Senior Engineer, your role will be to support the process and project engineering activities of the Company. The ideal candidate will be enthusiastic, self-motivated and flexible and will be able to work under pressure to solve problems creatively. With a first degree or Masters in Chemical Engineering, you will need good analytical skills, but have a strong focus on achieving results.

In return Prosonix offers a competitive salary package including a performance-related bonus scheme and contributory pension.

This is a great opportunity to join a growing company in an attractive location and to make a real contribution to the business whilst building an experience base for future professional development.
